word : hello

A greeting (salutation) said when meeting someone or acknowledging someone's arrival or presence.

word :kind

A type, race or category; a group of entities that have common characteristics such that they may be grouped together.

word : mind

Somebody that embodies certain mental qualities.

Project objective

- You will be building a Dictionary app project using HTML, CSS, and JavaScript.
- In the end, we will have a frontend application in which you can search for meaning of words and check your search history.

- The API we are going to use in this project is

<https://api.dictionaryapi.dev/api/v2/entries/en/hello>

- The format of API is

<https://api.dictionaryapi.dev/api/v2/entries/en/<word>>

Project Context

- We all do reading and get confused with the meaning of some words so it would be helpful if we had an application where we search for words and get the meaning of words and a page where we could see all the searched words.
- The reason for the creation of this website is to make a platform where people can search for the specific words and it would save in search history to read them later .

Tech stack Prerequisite: HTML, CSS, JavaScript.

Project Steps

- ▶ **Step-1:** Set up the project
- ▶ **Step-2:**The search words page
- ▶ **Step-3:**The history page
- ▶ **Step-4:**Saving data to localStorage

Project Checkpoints

- The search button
- The history page button
- The search page button

- The delete button
